The results of your allergy testing have returned (mostly) and are shown above.

Your immune system testing was reassuring. Your immunoglobulin levels were in the normal range. Your CBC test was largely normal, with a very slightly low hematocrit (this is likely just day-to-day variability, but could be a very early sign of any anemia -no immediate follow-up is needed).

Your flow cytometry testing showed a high percentage of one type of immune cells called an NK cell, but the absolute number was in the normal range. This is not an alarming finding, as the absolute number is the important value. Your transitional CD8 cell percentage was also slightly low, but the absolute number was normal. The rest of your CD8 T-cell testing was normal, and even if the absolute value of transitional CD8 cells was low, this would not be of any concern for your immune system function. Overall, this testing is reassuring.

Your tetanus immunization response test was not sent by the lab, and I am not sure why this was not sent. I apologize for this inconvenience. Based on the rest of your testing looking normal, I do not recommend that you need to go to the lab at this point just to have this rechecked. We could always consider the sending this again in the

future.

Your allergy testing was negative with the exception of allergy to dust mite. I suspect dust mite allergy could be an important contributor to some of your recent symptoms.

I recommend dust mite avoidance measures including the following:

- Try to avoid fans and other moving air while sleeping, as this can keep dust in the air.
- I recommend allergen pillow cases and mattress covers to be used under normal sheets.
- Top sheets and pillow cases should be washed in hot water or dried in high heat.
- Pillows should be replaced every 2-3 years.
- Use a dust mask while cleaning. After cleaning a room, let the dust settle for 60 minutes before spending time in that room.
- A damp mop or 'swiffer' type cleaner is preferable to a broom for cleaning hard floors.
- When replacing your vacuum, choose one with a HEPA filter.

I also recommend continuing with the budesonide rinses as recommended by Dr. Lee, which should be effective in treating dust mite allergy.

Overall, this testing is good news. Your immune system appears to be functioning well, and we identified an allergen that is amenable to allergen reduction and treatment. Please do not hesitate to reach out if you have any questions.

Sincerely,

Patrick J Brennan, MD, PhD
