CT FACE (SINUS) WITHOUT CONTRAST

Referring clinician's provided indication for this examination in Epic: * Sinusitis, chronic or recurrent

TECHNIQUE: CT of the sinuses was performed without intravenous contrast.

COMPARISON: CT FACE (SINUS) WITHOUT CONTRAST 2025-Aug-11

FINDINGS:

Frontal sinuses and frontoethmoidal junctions: Clear, improved from prior.

Anterior and posterior ethmoid air cells: Clear, improved from prior.

Maxillary sinuses and infundibula: Decreased mild mucosal thickening of the right maxillary sinus with a small amount of aerosolized secretions partially opacifying the right ostiomeatal unit. The left maxillary sinus and ostiomeatal unit are patent.

Sphenoid sinuses and sphenoid recesses: Minimal bilateral mucosal thickening. The sphenoid recesses are patent.

Nasal cavity: Leftward nasal septal deviation.

Surgical anatomy:

Ostiomeatal units: Intact.

Infundibula: Bordered laterally and superiorly by orbital walls;ethmoid air cells.

Onodi air cells or infraorbital air cells: Not present.

Laminae papyracea: Intact.

Ethmoid roofs and cribriform plates: Left fovea ethmoidalis is asymmetrically higher than the right.

Optic canals and carotid canals: Well covered by bone.

Imaged maxillary teeth: No periapical lucencies.

Mastoid air cells and middle ear cavities: Mild opacification of the left mastoid air cells. New soft tissue opacification in the left epitympanic fossa and thickening of the left tympanic membrane.

Temporomandibular joints: No significant degenerative remodeling.

Brain: Images of the brain parenchyma are not of diagnostic quality for the soft tissues. No focal abnormality is visible with this technique.

Orbits and globes: No abnormality.

IMPRESSION:

1. Decreased mild paranasal sinus disease, most pronounced in the right maxillary sinus where there is partial opacification of the ostiomeatal unit.
2. New soft tissue opacification in the left epitympanic fossa and thickening of the left tympanic membrane, which may be sequela of prior otitis media.

ATTESTATION: I, William Mehan, as teaching physician have reviewed the images, if any, for this patient's exam, and if necessary, have edited the report originally created by Priyanka Khavita Naik.
